

# The Neurofeedback Advocacy Project

## Our Mission

To make neurofeedback accessible to those who need it by building capacity within our existing healthcare system, with a focus on agencies working with the underserved and those most vulnerable.

To advance our mission, we offer training and ongoing monitoring/evaluation of processes and outcomes to eligible agencies. To be eligible, an agency/practice must serve either an underserved/difficult-to-engage population or have at least 80% of clients who are low-income/Medicaid-eligible.

## What does membership include?

Initial 40-hour training in neurofeedback (2-week online class)

Advanced training classes: typically 1-day (online)

Use of the Results Tracking System (RTS)

Bi-weekly case discussions (online)

QIK test device and access to QIK Cognitive Tests

## Cost of Membership

We offer a year of training and support for \$1,700/registrant. This includes the initial training, a year of ongoing clinical support and evaluation with our Results Tracking System. A minimum of 3 clinicians and 1 licensed supervisor is required.

## Access to Affordable Equipment

Members of the NAP can access the complete Cygnet Neurofeedback System for \$400/month/system with no long-term commitment through a leasing program with our partner Bee Medic. It includes:

- Software
- All feedback games
- "Gaming" level laptop computer
- NeuroAmp II
- HDMI cord
- Tactile feedback device
- 1 (2-ch) set of electrodes
- Initial supply of EEG paste and gel
- Online technical support
- Loaner replacements should the equipment need repair
- Not included: monitor or TV

Agencies may arrange purchase of equipment directly with Bee Medic at any time.
